As more consumers realize the importance of nutrition and incorporating healthy foods into their diets, they also recognize the need that their skin has for these same nutrients. In general, trends in nutrition tend to mirror cosmetic trends. This is especially true for super fruits: exotic fruits with high antioxidant content that are very good for the body when consumed and equally beneficial for the skin when applied topically.

Arbor Organics, LLC offers six freeze-dried fruit juice powders that are readily water-soluble and can easily be incorporated into an aqueous product or the water phase of an emulsion. Each of these juices is Certified Organic by the USDA National Organic Program, guaranteeing the highest quality ingredients and offering the maximum health benefits without harsh additives.

NOP Organic Acai Juice FD: Acai, a berry native to Central and South America, is considered to be one of nature's most complete and beneficial foods. It is rich in antioxidants, vitamins and minerals and has potent anti-inflammatory benefits. Acai has ten times more antioxidants than red grapes and 10 to 30 times the anthocyanins of red wine. These extraordinarily high antioxidant levels help the skin fight free radical damage and premature aging. Acai has become a popular addition to dietary supplements, which claim that the fruit increases energy levels, improves heart health and sleep patterns, reduces cholesterol levels, and yields healthy skin.

NOP Organic Aloe Juice FD: A native African plant, aloe has long been renowned as a healing agent and is commonly applied topically after burns. Greeks and Romans reportedly used aloe as a topical healer. Applying aloe to the skin improves wound healing, decreases inflammation, and protects damaged tissues from infection.

NOP Organic Concord Grape Juice FD: The Concord grape is said to have the most nutritious juice of all grape varieties. Its name is derived from the location of its development: Concord, Massachusetts. The Concord grape is commonly used as the source for grape juice and jelly. Well-known for antioxidant activity, the dark blue or purple Concord grape contains an

abundance of polyphenols, especially flavonoids. Grapes offer anti-inflammatory and astringent benefits, as well as expectorant and emollient qualities.

NOP Organic Lemon Juice FD: Lemon, a popular citrus fruit and common cooking ingredient, has long been used for its antiseptic properties. It is widely found in antibacterial products and can be used as a household cleaner and deodorizer. The scent of lemon has a calming effect and may be useful in aromatherapy products. Lemons contain flavonoids that offer potent antioxidant properties. When applied to the skin, lemon may reduce the appearance and prevalence of acne and eczema.

NOP Organic Niagara Grape Juice FD: The light green Niagara grape is the leading grape grown in the United States and may be used to make wine, champagne, jam, and jelly. It is commonly eaten whole as a snack due to its lack of seeds. As is the case for all varieties of grapes, the Niagara is full of vitamins and antioxidants, healthy for the body inside and out. The Niagara has grown in popularity in recent years due to its milder flavor and low ability to stain fabrics compared to the Concord.

NOP Organic Pomegranate Juice FD: The pomegranate has a long history of medicinal use, and references to pomegranate are found in most ancient cultures. Commonly cultivated in the Mediterranean region, pomegranate offers significant health benefits in both its fruit and seeds. It boasts high levels of vitamin B5, vitamin C, and potassium. Pomegranate has an antioxidant potency about three times greater than red wine or green tea, making it invaluable for personal care use. Pomegranates help facilitate skin repair by promoting dermis and epidermis regeneration and may halt signs of skin aging.
